

■ Bank XXX Call Centre Officer Reference Guide — Payments & Transfer Services (Revised)

This guide provides call centre officers with practical advice on how to handle customer enquiries about payments and transfers in Bank XXX's mobile banking app. It focuses on what to be aware of, how to respond, and how to maintain customer trust while ensuring fraud prevention.

Transaction Limits

When a transfer fails or cannot be completed, officers should first check whether the customer has reached their daily or per-transaction limit.

If the transaction limit has been hit, the issue is that the transfer amount exceeds the current limit. The appropriate plan is to guide the customer to either increase their limit or reduce the transaction amount.

If the customer has recently increased their transaction limit, the issue is that the new limit is not yet active because of the 12-hour cooling period that applies for security reasons. During this time, transactions above the previous limit will still be blocked. The best plan is to advise the customer to wait until the cooling period ends, or, if the transaction is urgent, to make smaller transfers within the old limit until the new one takes effect. Reassure the customer that this waiting period is a deliberate safety feature, not a system fault.

Adding or Managing Payees

Customers must have a registered payee for any transaction above \$1,000.

If the customer tries to transfer more than \$1,000 without a payee, the issue is that no payee has been set up for that amount. The plan is to either add a new payee or complete a smaller transfer under \$1,000, which does not require a payee.

If the customer recently added a new payee, the issue is likely that the payee is still within the 12-hour activation (cooling) period before funds can be sent. This restriction prevents fraudsters from adding unauthorized recipients. The plan is to wait until the cooling period ends, or, if the payment is urgent, to send a smaller amount under \$1,000 that does not require a payee.

Transfers and Scheduled Payments

If a customer says their transfer didn't go through: first check whether the transfer was scheduled for a future date or saved as a draft. Confirm if step-up verification (digital token or OTP) was completed. Transfers can also be held for internal fraud review if patterns appear unusual. Avoid giving technical details — instead say: 'Sometimes our system

performs a quick safety check before confirming certain transactions. It will go through automatically once cleared.' Encourage customers to always check confirmation messages or email receipts before assuming failure.

Overseas and Cross-Border Payments

Be aware that exchange rates for cross-border or QR payments are indicative and can refresh before confirmation. Some cross-border schemes have daily limits (for example, PromptPay Thailand ≈ S\$1,000/day). If a customer mentions 'rate expired' or 'payment failed,' suggest they refresh or retry later. Remind them never to share screenshots or QR codes that show account information.

PayNow and QR Code Use

Remind customers that linking their NRIC/FIN or mobile number directs incoming funds to the selected account. Ensure they always review recipient details carefully before confirming a payment. For receiving money, QR codes must be generated from the official Bank XXX app. If customers are asked to scan a code from an unknown source, advise them not to proceed and report potential scams.

Bill Payments and Non-Bank Transfers

If a bill payment fails, first verify the biller name and reference number. Wrong reference numbers may post to another account. For fintech wallets or NFIs, explain that minor delays can happen due to partner processing. Never promise instant reversals — record the transaction reference, inform the customer of the review process, and escalate as required.

Electronic Deferred Payments (EDP / EDP+)

EDP transactions are typically used by corporate or high-value customers. Always clarify whether the caller is the issuer or recipient — this determines what actions they can take. Advise them to review payment details carefully before confirming, cancelling, or rejecting, as these are legally binding.

Documentation and After-Call Notes

Record the exact issue and the verification steps completed, Good notes ensure smooth handovers if follow-up is needed.
